

SAMPLE QUICK CHECK

A clear fix list before your website goes live.

This fictional Example Coffee review shows the format of a PageTidy Quick Check: verified findings, plain-English impact, and one concrete next action for each item.

PAGE	Example Coffee subscription landing page
INTENDED ACTION	Start a monthly coffee subscription
REVIEW SCOPE	One public page, desktop and mobile
OVERALL STATUS	Almost ready - fix 3 items before sharing

Executive summary

The page communicates the product clearly, but the primary action becomes ambiguous on mobile and the shared-link preview is unfinished. Fix the three high-priority items before launch. The remaining items are useful polish and do not need to delay publication.

3 FIX BEFORE LAUNCH

2 FIX SOON

1 OPTIONAL

What this report is for

A focused pre-launch review for founders, no-code makers, designers, and small businesses that need a short list they can act on - not another automated score.

FIX BEFORE LAUNCH

Three changes that should happen before the page is shared.

HIGH 01

Primary button does not describe the action

Location: Hero section, button labeled 'Learn more'.

Why it matters: Visitors cannot tell whether the button opens pricing, explains the subscription, or starts checkout.

What to do: Rename it to 'Choose my coffee plan' and send it directly to the plan selector.

HIGH 02

Mobile page scrolls sideways

Location: Comparison table below 'Pick your roast' at approximately 375 px wide.

Why it matters: Part of the price and order button sits outside the visible screen, making the page feel broken.

What to do: Stack the plan cards on small screens or make the table wrap. Re-test at 320 px and 375 px widths.

HIGH 03

Shared link has no useful preview image

Location: Page sharing information (og:image).

Why it matters: Links shared in chat or social platforms may look blank or generic, reducing recognition at launch.

What to do: Publish a stable, absolute image URL with a simple product visual and readable brand name, then test the shared URL.

FIX SOON

Important polish that does not need to delay launch.

MEDIUM 04

Email field has no visible label

Location: Footer signup form.

Why it matters: Placeholder text disappears after typing and may not give assistive technology a dependable name for the field.

What to do: Add a visible 'Email address' label connected to the input. Keep a placeholder only as an example if needed.

MEDIUM 05

Testimonial text becomes difficult to read

Location: Light gray text below each customer name.

Why it matters: Small, low-contrast text is tiring to read, especially on a phone or dim display.

What to do: Darken the secondary text and keep it at a comfortable body-text size.

OPTIONAL POLISH

LOW 06

Browser tab title is generic

Location: Browser tab title, currently 'Home'.

Why it matters: A generic title is hard to recognize among open tabs and does not explain the page when bookmarked.

What to do: Use 'Example Coffee - Fresh Roasts Delivered Monthly'.

RE-CHECK

A short list for the final pass.

Use this after the fixes are live. Every item should be checked on the public page, not only in an editor preview.

- ☐ Primary hero button names the next action.
- ☐ No horizontal scrolling at 320 px and 375 px widths.
- ☐ Shared link displays the intended image and description.
- ☐ Email input has a persistent label.
- ☐ Testimonial text is comfortably readable.
- ☐ Browser tab uses a descriptive title.

Scope note

This sample demonstrates the report format. It is not an accessibility certification, legal compliance review, security test, comprehensive SEO audit, development service, or guarantee of business results.

Quick Check - \$35 USD

One public page on desktop and mobile, up to 10 prioritized findings, delivered by email within 2 business days.
