

The 10-minute website pre-publish checklist

For small-business owners, solo founders, designers, and no-code makers.

Make every main action specific

01

Replace labels like 'Learn more' with the result: 'See pricing,' 'Book a consultation,' or 'View delivery areas.'

Open every repeated link once

02

Test the header, page body, and footer separately. Buttons with the same words can still point to different or outdated pages.

Complete the real form from start to finish

03

Keep a visible label above each field. Submit realistic test information and confirm the page shows a clear success or next step.

Use the page on a phone with one thumb

04

Read the smallest text and tap every primary action. Increase anything that feels cramped, tiny, or easy to miss.

Inspect the page before someone opens it

05

Set a descriptive browser-tab title, useful search description, favicon, and stable image for links shared in messages or social posts.

BEFORE YOU SHARE THE LINK

One final pass

1 Open every action

2 Submit the main form

3 Check a real phone

4 Preview the shared link

5 Ask what someone would click first
